PROFESSIONAL SUMMARY

Fresher Software Engineer based in Berlin with hands-on experience building complete, working web applications from scratch in HTML, CSS, and JavaScript. Comfortable owning a project end to end: designing the logic, integrating live APIs, debugging real issues through regression testing, and shipping a polished, responsive result. Looking for an entry-level role to keep learning and contribute from day one.

SKILLS

Languages & Web: HTML5, CSS3, JavaScript (DOM manipulation, vanilla JS)

Tools & Practices: Git & GitHub, REST API integration, Node.js (regression testing), responsive design

Languages spoken: English, German

Currently learning: AI-assisted development and modern web frameworks

PROJECTS

CAPI Berlin Shift Roster | HTML, CSS, JavaScript, Node (testing)

Jul 2026

Live Demo: <https://amitkumar55555.github.io/roster/> • GitHub: <https://github.com/amitkumar55555/roster>

- Built a staff-scheduling web app solving a real constraint problem for a small Berlin store: 8 employees across 3 contract types, mandatory daily coverage, and competing labor rules.
- Designed a hand-built, staged rule engine with a tiered priority fallback (compliant schedule, then soft-cap relaxation, then logged override) so mandatory shifts are never silently left uncovered.
- Found and fixed multiple real bugs using Node-based regression tests written directly against the scheduling logic, including a cross-week scheduling violation and a UTC/timezone bug that mis-scheduled shifts.
- Added drag-and-drop manual editing, holiday management, and a mobile-installable, fully responsive UI with zero external dependencies.

Berlin Weather App | HTML, CSS, JavaScript, Open-Meteo API

Aug 2025

Live Demo: https://amitkumar55555.github.io/Berlin_weather/ • GitHub: https://github.com/amitkumar55555/Berlin_weather

- Built a real-time weather site for Berlin that renders one of six animated weather scenes, mapped from live WMO weather codes returned by the Open-Meteo API.
- Implemented automatic data refresh and a fully responsive layout with no external dependencies or API key required.

Tic-Tac-Toe | HTML, CSS, JavaScript

Aug 2025

Live Demo: <https://amitkumar55555.github.io/Tic-Tac-Toe/> • GitHub: <https://github.com/amitkumar55555/Tic-Tac-Toe>

- Built a classic two-player game with complete win and draw detection logic using vanilla JavaScript and DOM manipulation.

Calculator | HTML, CSS, JavaScript

Aug 2025

Live Demo: <https://amitkumar55555.github.io/calculator/> • GitHub: <https://github.com/amitkumar55555/calculator>

- Built a responsive calculator supporting core arithmetic operations with a clean, functional interface.

EDUCATION

Bachelor of Computer Applications (BCA)

2024

Chandigarh University
